REC_DS using C_Week 2_COD_Question 2

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Moniksha, a chess coach organizing a tournament, needs a program to manage participant IDs efficiently. The program maintains a doubly linked list of IDs and offers two functions: Append to add IDs as students register, and Print Maximum ID to identify the highest ID for administrative tasks.

This tool streamlines tournament organization, allowing Moniksha to focus on coaching her students effectively.

Input Format

The first line consists of an integer n, representing the number of participant IDs to be added.

The second line consists of n space-separated integers representing the participant IDs.

The output displays a single integer, representing the maximum participant ID.

If the list is empty, the output prints "Empty list!".

Refer to the sample output for the formatting specifications.

```
Sample Test Case
```

```
Input: 3
   163 137 155
   Output: 163
Answer
   #include <stdio.h>
   #include <stdlib.h>
   struct Node {
      int id;
                 // Participant ID
      struct Node* next; // Pointer to next node
      struct Node* prev; // Pointer to previous node
   };
   // Function to create a new node with a given participant ID
   struct Node* createNode(int id) {
      struct Node* newNode = (struct Node*)malloc(sizeof(struct Node));
      newNode->id = id:
      newNode->next = NULL;
      newNode->prev = NULL;
      return newNode;
   }
   // Function to append a participant ID to the doubly linked list
   void append(struct Node** head, int id) {
      struct Node* newNode = createNode(id);
      if (*head == NULL) {
       // If the list is empty, the new node is the head of the list
       *head = newNode;
     } else {
```

```
240701504
       struct Node* temp = *head;
        // Traverse to the last node
        while (temp->next != NULL) {
          temp = temp->next;
        // Add the new node to the end of the list
        temp->next = newNode;
        newNode->prev = temp;
     }
    }
    // Function to find the maximum participant ID in the list
    int findMax(struct Node* head) {
      if (head == NULL) {
        return -1; // Return -1 if the list is empty
      struct Node* temp = head;
      int max = temp->id;
      // Traverse the list and find the maximum ID
      while (temp != NULL) {
        if (temp->id > max) {
          max = temp->id;
        temp = temp->next;
      return max;
    // Function to free the memory of the list
    void freeList(struct Node* head) {
      struct Node* temp;
      while (head != NULL) {
        temp = head;
        head = head->next;
        free(temp);
int main() {
```

```
scanf("%d", &n);
       if (n == 0) {
         // If no participant IDs are to be added, print "Empty list!"
         printf("Empty list!\n");
         return 0:
       }
       struct Node* head = NULL;
       // Read the participant IDs and append them to the list
       for (int i = 0; i < n; i++) {
                                                      240101504
       wint id;
         scanf("%d", &id);
         append(&head, id);
       // Find and print the maximum participant ID
       int max = findMax(head);
       if (max != -1) {
         printf("%d\n", max);
       } else {
         printf("Empty list!\n");
freeList(head);
       // Free the memory used by the list
    Status: Correct
                                                                         Marks: 10/10
